

TEXAS A&M UNIVERSITY
School of Public Health

Master of Public Health *Health Promotion and Community Health Sciences*

Choose a Master's Degree in Public Health!

Our award-winning Master of Public Health (MPH) core curriculum is innovative education at its best! The integrated program begins with cross-disciplinary classes offering relevant practical skills with a collaborative learning structure focusing on population health issues. You will learn how to solve real problems gaining a better understanding of the determinants of health, applied methods, disease epidemiology, environmental health, occupational safety, health policy and management, and health and safety interventions.

Health Promotion and Community Health Sciences

Improving the health and well-being of communities

HHealth Promotion and Community Health Sciences promotes healthy living and prepares students to identify the role of biological, behavioral, environmental and social forces on population health. Students gain practical experience in classes that incorporate community-based, hands-on learning in planning and evaluating programs, services and policies designed to improve the health of individuals and communities. You will learn people problem-solving skills related to behavioral change, interpersonal relationships and organizational structures that will make you a more effective leader in multiple settings from the private sector to clinical environments to local, state and federal agencies and organizations.

There is flexibility in our MPH program that allows you to tailor your degree to your interests through offering you four graduate electives of your choosing. You can enhance your education and job prospects by graduating with a certificate in Maternal and Child Health, Global Health, or Health Systems Management.

We are dedicated to your success! Our mentorship program matches incoming students with 2nd year students to help ease your transition into graduate school. Your faculty advisors are readily available through various communications platforms and weekly group meetings.

What Students Are Saying

“Public health is a versatile field that can be implemented across different specialties in any industry. The faculty and staff at the school work tirelessly to help students find classes and practicum experiences that align with their interests and provide resources for students that can impact their overall wellness while completing their respective program.” – Katelyn Murphy

E. Lisako McKyer, PhD, MPH

Leading the Way in Research

Our faculty represent a wide array of expertise including community health development strategies and assessment, minority health disparities, rural and border health issues, global health, adolescent mental health and substance abuse, reducing food insecurity, chronic disease prevention, active living policy and obesity prevention. One example is the Health Disparities, Education, Awareness, Research and Training (HDEART) Consortium led by E. Lisako McKyer, PhD, MPH. Public Health is Global Health

Public Health is Global Health

Our international study abroad programs challenge you to think different and grow as a person, a student and a public health professional. Students have completed practicums both nationally and internationally that provide an opportunity for them to practice the concepts, strategies and skills from the classroom environment in a real-world setting with an experienced preceptor at a host organization.
